

## SolarWinds Tools

### WEB HELP DESK®

Affordable help desk ticketing and asset management

### DAMEWARE® REMOTE SUPPORT

Remote control and systems management tools

### ENGINEER'S TOOLSET

Sixty must-have network troubleshooting and diagnostic tools

### KIWI SYSLOG® SERVER

Centralized log management for network devices and servers

### NETWORK TOPOLOGY MAPPER

Automatically plot your network, typically in minutes

### MOBILE ADMIN®

Simplify IT administration and management from mobile devices

### SERV-U® MANAGED FILE TRANSFER

Safe file transfers inside and outside your organization

## SolarWinds Security Products

### LOG & EVENT MANAGER

### BACKUP

### RISK INTELLIGENCE

### SERV-U

### PATCH MANAGER

### NETWORK CONFIGURATION MANAGER

### MAIL ASSURE

### LOG MANAGER FOR ORION®

### THREAT MONITOR™

### ACCESS RIGHTS MANAGER

# Simple, powerful, and affordable monitoring software IT pros love

Product Overview Guide

# IT monitoring built on the Orion Platform

The Orion Platform is an on-prem, modular software architecture that is designed to offer IT departments unified visibility, enterprise scalability, and ease of use in one highly extensible console.

### NETWORK PERFORMANCE MONITOR

Fault, availability, and performance monitoring for networks of all sizes

- Speeds troubleshooting, resolves network outages, and helps reduce downtime
- Customizable network topology and dependency-aware intelligent alerts
- Wireless heat maps, automated capacity forecasting, alerting, and reports

### NETFLOW TRAFFIC ANALYZER

Network traffic and bandwidth utilization in an easy-to-view dashboard

- Monitor interface-level network bandwidth and traffic patterns with up to one-minute granularity
- Bandwidth use by user, application, protocol, and IP address group
- Analyze traffic patterns over months, days, or minutes by drilling down into any network element

### SERVER & APPLICATION MONITOR

Manage, troubleshoot, and resolve app performance and availability issues

- Deep visibility into applications, database, host server, virtualization, and storage systems on-prem as well as in the cloud
- Support for over 1,200 applications out of the box, including Exchange™, SQL Server®, and more
- Software asset inventory and capacity planning

### DATABASE PERFORMANCE ANALYZER

Get help solving complex database issues and optimize application response times

- See exactly what is impacting performance inside your database and get expert resolution advice
- Correlate response time with VM resources, host, and storage I/O with history and baselines
- Agentless architecture ideal for test/dev and production, on-premises, or in the cloud

### NETWORK CONFIGURATION MANAGER

Centralized network device change and configuration management software

- Automated configuration backups, comparisons, and rollback
- Real-time configuration change detection and audits for compliance management
- Bulk deploy configuration changes
- Cisco® device vulnerability scanning and identification

### IP ADDRESS MANAGER

Easy-to-use IP address management software

- Automated IP address tracking, alerting, and reporting
- Integrated DHCP, DNS, and IP address management
- IP detail and history tracking

### VIRTUALIZATION MANAGER

Performance, troubleshooting, capacity, and sprawl management from VM to datastore

- Deep visibility into usage and performance of VMs, hosts, clusters, and datastores
- Enhanced actionable intelligence allows for single-click, multiple-step remediation of active and predicted VM performance and resource allocation
- Power off idle VMs, adjust over- and under-allocated resources, help fix co-stop issues typically in minutes

### STORAGE RESOURCE MONITOR

Multi-vendor storage capacity and performance monitoring

- Designed to provide real-time performance visibility to SAN and NAS array LUNs, RAID groups, volumes, disks, and more
- Automated storage capacity planning to help identify hot spots, peak hours, and potential outages
- Identify LUN contention and other difficult storage performance issues

### NETWORK OPERATIONS MANAGER

Unified network management software for on-premises, cloud, and hybrid

- Network performance monitoring and troubleshooting
- Traffic, bandwidth, and WAN monitoring
- User and device tracking

### NETWORK AUTOMATION MANAGER

Unified network automation and operations management software

- Advanced network monitoring and troubleshooting
- Traffic, bandwidth, and WAN monitoring
- Change and configuration management
- High availability

### WEB PERFORMANCE MONITOR

Measure user experience and troubleshoot latency issues for web applications

- Visibility into end-user experience for web and SaaS application transactions
- Monitor performance for applications behind the firewall from multiple geographic locations
- Built-in integration with the Orion Platform can show infrastructure dependencies to help with faster troubleshooting

### SERVER CONFIGURATION MONITOR

Easy to use Windows® system and application change monitoring

- Asses Windows system and application changes against custom baselines
- Correlate performance incidents against configuration changes
- Detect and track changes over time
